The KRONE Contact Difference

- ▶ Insulation clamping ribs hold the wire securely and isolate the contact area from vibration and mechanical stress.
- ▶ Silver-plated contact tags at 45° angles across the axis of the wire make a solid, gas-tight connection.
- ▶ Unique axial and torsional restoring forces maintain a durable connection.

Effects of KRONE contact on wire:

Positioning contacts at a 45° angle allows more wire between contact points and provides a more reliable, stress-resistant connection.

Effects of other traditional contacts on wire:

Positioning contacts at a 90° angle produces a point of weakness subject to possible breakage.

CERTIFICATE

The TÜV CERT Certification Body of Rheinisch-Westfälischer TÜV e.V. hereby certifies in accordance with TÜV CERT procedure that
